Please Note: Not all Extra Large cutters are carried in stock, please allow 3 to 4 weeks for delivery.

All Prop Protectors are made by British craftsmen from the finest quality marine grade stainless steel to BS970-316-S31. Each unit is supplied with A4 quality stainless steel fasteners, Allen key wrenches, thread locking compound, safety warning labels and fitting instructions.

### UNDERWATER INSTALLATION

One of the unique features of Prop Protectors is that they can be installed with the vessel afloat.

However, the screwlock supplied with each cutter is intended only for use with the vessel out of the water as screwlock will not cure under water.

Owners wishing to carry out an underwater installation should not use the fasteners or screwlock supplied but should order our special self-locking fasteners that we supply specifically for this purpose.

These are available as an optional extra and prices are as follows:

For all Slide-On cutters a single set screw is required for which the cost is £2.00

For Standard Clamp-On cutters, one setscrew and two cap head screws are required for which the cost is £7.50

For all Extra-Large Clamp-On cutters, one setscrew and two cap head screws are required for which the cost is £11.50.
